**Kegtron Pro Keg Monitoring System**

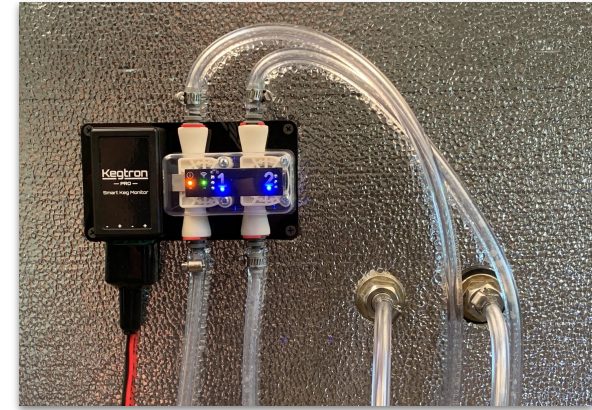

## What is Kegtron Pro?

### A Cloud-Based Keg Management System

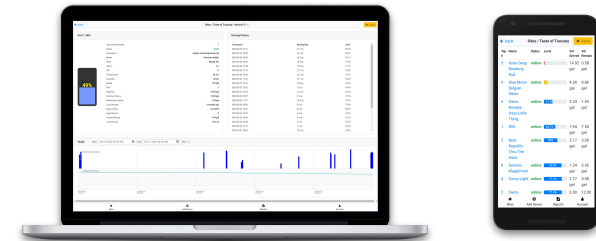

- All keg activity is measured by keg monitor hardware that is installed near your kegs.
- A web-based Cloud Dashboard provides access to all data

### Key Features

- Live view of all keg levels and activity
- Precision measurement of all servings
- Detailed reporting and statistics
- Optional email and text alerts
- Accessible from any location on any device

**Keg Monitor Hardware**

**Cloud Dashboard**

## System Setup

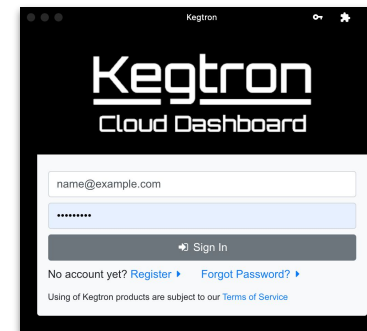

**NOTE:** This presentation assumes your keg monitor hardware is already installed and the Cloud Dashboard initial setup has occurred.

Please visit the [Kegtron Pro product page](#) for the following:

- Installation and Setup Guide
- Installation Videos

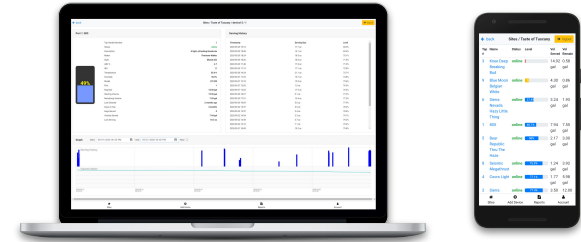

## Cloud Dashboard Login

- Go to [dashboard.kegtron.com](https://dashboard.kegtron.com) from any browser
- Enter the username (email address) and password that has been established for your site. Check with your manager or installer if needed.
- In most cases, a shared account will be used for all users at a specific site

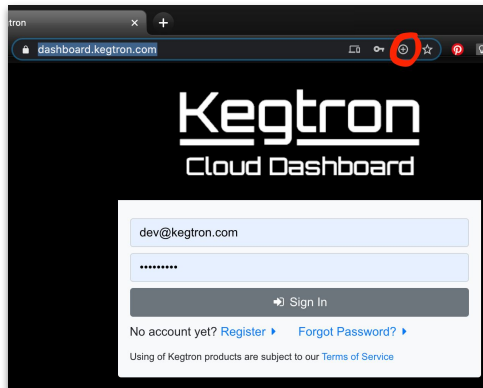

## Cloud Dashboard Intro

- The Cloud Dashboard provides visibility to all keg data
- It can be viewed from any Mac, PC or mobile device
- It is a 'Web App' which can be viewed in a browser or installed as an app. **This is an optional step.**

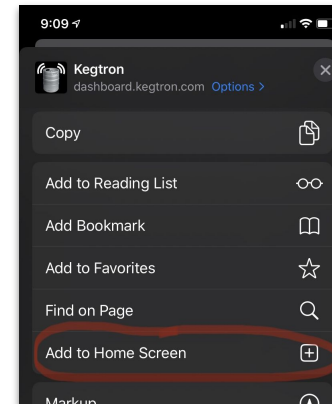

## App Installation

### Mac / Windows / Android

- Open dashboard in Chrome browser
- Click the “+” icon in the address bar

### iOS

- Open dashboard in Safari browser
- Click the “share” icon (box with up arrow)
- Click “Add to Home Screen”

- Each view provides live keg statistics
- Navigate between views for more or less detail

# Status & Inventory

- The Keg List View is the easiest way to see a summary view of your kegs for your location
- This is also the best place to check overall inventory and keg freshness
- System configurations can be adjusted via the Settings page

# Reports

- The Reports Tab provides a detailed summary of all servings over a specific timeframe
- Reports do **not** provide current keg levels (see Keg List View)
- Equivalent usage data is also available on the Keg Details View
- .CSV data can be used in spreadsheet or accounting tools
- Reports can be printed or exported to a .PDF file

**Keg and site totals are summarized at the end of the report**

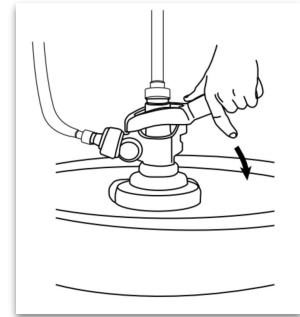

**Taste of Tuscany Total**

Keg Name	Servings	Volume Served
SLO Cali Squeeze	102	10.23 gal (1309 oz)
Chocolate Hazelnut Porter	56	7.83 gal (1003 oz)
Knee Deep Breaking Bud	64	6.35 gal (813 oz)
Sierra Nevada Hazy Little Thing	51	5.44 gal (697 oz)
805	47	4.64 gal (594 oz)
Seismic Megathrust	52	3.98 gal (509 oz)
Bear Republic Thru The Haze	60	3.88 gal (497 oz)
Sierra Nevada Pale Ale	56	3.57 gal (457 oz)
Coors Light	43	2.31 gal (295 oz)
Blue Moon Belgian White	24	1.26 gal (161 oz)
<b>Total Servings: 555, Total Volume: 49.49 gal (6335 oz)</b>		

# Keg Changes

When a keg is empty and a new keg is tapped, it is very important to ensure that your keg monitor stays in sync.

This can be accomplished in two different ways:

1. Open the Keg List View -> Settings page and click the **Reset Keg Volume** button for the new keg:

Volume Reset

Reset Keg Volume

2. Turn on the **Auto Keg Reset** function:

Auto Keg Reset

Enable

Both methods are valid, although option #1 will maximize reporting accuracy. For more details, please read [Understanding Keg Volume Measurements](#).

The keg **Date Tapped** will automatically be updated using either method above.

# Lineup Changes

When you change the type or size of kegs being served, the Cloud Dashboard must be updated to match.

1. Open the Keg List View -> Settings page
2. Update the **State**, **Name**, **Keg Size**, **Starting Volume** and **Serving Size** fields. All other fields are optional.
3. Click the **Save Configuration** button
4. If a new keg was just tapped, use the **Reset Keg Volume** button as described on the previous page
5. Repeat for each new keg

# Cleaning Lines

When cleaning draft lines it is important to take steps to ensure that the cleaning process does not corrupt beverage measurements.

There are several methods available:

Cleaning Mode	Enable
Auto Clean Detect (sec)	120

1. **Manual Cleaning Mode** - When **Cleaning Mode** is enabled via the Settings page a keg monitor will not record any servings until this mode is disabled.
2. **Auto Cleaning Detection** - If continuous liquid flow is detected for a duration greater than the **Auto Clean Detect** value then a serving is not logged until flow stops and starts again.
3. **Power Off** - No measurements are recorded when a keg monitor is powered off.

The keg **Date Cleaned** will be automatically updated for methods #1 & #2.

# Alerts

Alerts provide a way to be notified of important events without having to check the Dashboard.

- Setup your desired email and phone numbers to receive alerts. For phone numbers outside US/Canada use “+” and country code prefix (e.g. +44 for UK)
- Adjust low and empty keg level thresholds as desired. The same thresholds will be used for all ports on a specific keg monitor.
- **After Hours Alerts** will be triggered anytime a serving is detected outside business hours. Define the opening time and duration for each day. For example, if the Friday hours are noon to 2:00AM, set the start hour to 12:00PM and a duration of 14 hours.
